

2D C^{••}ö^{••}ö^{••}rdgen

Chemistry in Plane View

Nic Zonta - Schrödinger

W. H. G.

"O day and night, but this is wondrous strange"

LONDON
SEELEY & Co., ESSEX STREET, STRAND
Price Half-a-crown

"And therefore as a stranger give it welcome"

Goals I

Specificity VS Simplicity

Schrodinger's law: no matter how complicated the problem is, the guys in MatSci have a worse one for you

maintaining code is a cost. **Simplify**

Goals II

Accuracy VS Speed

no right answers

Great starting point Nic!
now just make it faster and more accurate

Lets play
2D Coordgen!

lvl1 - bonds

Divide...

...and conquer

lvl 2 - rings

Divide...

...and conquer

lvl 3 - ring systems

Divide...

Divide...

...and conquer

.mae format. Users can specify add their own

lvl 4 - clashes

flip

stretch

pivot

F1 S1 P1 F2 S2 P2 F2 S3 P3 F4 S4 P4

FF minimisation

lvl 4 - macrocycles

Hexagonal polyominoes

Honeycomb tetris

lvl 5 - macrocycle systems

Fantachemistry

ring flip

mirror

lvl 8 - molecular systems

Counterions

H^-

H^-

Li^+

Al^{3+}

H^-

H^-

Cs^+

O^-

O

Cs^+

O^-

Metal coordination

Acknowledgements

approach largely based on

Clark et al, 2006

test set from

Greg Landrum

John Mayfield
